

INTERCALL®

## INTERCALL® VIDEO CONTROLS FOR MICROSOFT® OFFICE LIVE MEETING POWERED BY RADVISION

The Video Controls feature for Microsoft Office Live Meeting is an add-in component which enables live video during your meeting, and is available on any dedicated Live Meeting site. (If you have a custom-branded site, named user or seat contract for Live Meeting, the option is available.) Through our partnership with RADVISION, you have the ability to stream images from your desktop webcam into your Live Meeting web conference, allowing you a fact-to-face experience during your virtual meetings!

### ▶ EASILY INTEGRATE VIDEO INTO YOUR WEB CONFERENCE

- Simple installation of the add-in feature automatically detects and configures for your existing webcam.
- Simple setup in your Live Meeting preferences allows your Video Controls to automatically appear in your web conferencing interface.
- Automatic login option allows for immediate connection of your video stream when you join your meeting.

### ▶ VIDEO FROM MULTIPLE POINTS

- The Video Controls feature supports up to ten video connections per meeting.
- Layout can adjust automatically depending on the number of video participants.

### ▶ FEATURES AND CONTROLS

- Choose from 22 unique layouts to allow presentation of different speakers, and synchronize that layout to the viewers' desktops.
- Multiple languages supported in the Video Controls interface to work with your Live Meeting account configuration.
- Additional password-protection, disconnect and "locking" features available so you can control whose video will be shown.
